Dear Ms. Gray,

I cursorily examined these proposed regulations and found them unintelligible. Sorry, but if you folks wan't to issue regulations that would effect the pocketbooks of everyone in the state of Delaware, you should explain what you are proposing to do in plain English.

We are already being charged too much to subsidize wind and solar power, all in the name of combatting global warming. There was a charge for over \$7 on my last Delmarva Power bill (not to mention another \$5 for the qualified fuel cell provider tariff), which I didn't appreciate paying. Even if global warming were a problem, these charges wouldn't have any material effect on average global temperatures over the next 100 years.

Now, I gather, the idea is to increase these charges by a substantial percentage. Is that correct?

If so, I am steadfastly opposed - as are a lot of Delawareans that I know and respect.

At a minimum, DNREC should seek authorization by the General Assembly for what it is proposing to do rather than relying on its supposed administrative authority.

Please advise if I can help further.

William Whipple III

If Del electric companies are surpassing current regulations as well as future requirements, keep them as they are. NO NEW REGS.

Continue monitoring under existing regs.
Monies generated to be returned to elec customers as rebates.

No uncontrolled slush funds.

Subject: Comments to: New Regulations Proposed: Regional Greenhouse Gas Initiative

Dear Ms. Gray,

Please accept my comments as a taxpaying, energy paying citizen of Delaware. I am concerned about the over reach of our government.

☒ The proposed regulations - will become law without any vote from the legislature – ☒ Taxation without representation. These laws are unconstitutional that are made by unelected bureaucrats!

☒ Shouldn't we as citizens of the State of Delaware be represented by votes of our elected Legislature!!

☒ End the program unless we see the results and transparency.

☒ Let's be transparent in Delaware to our citizens, especially if you are not hiding information. Do a better and more thorough analysis of the cost of the program, where the money raised was spent (the money is supposed to go toward energy efficiency programs), and facts and proof that the energy efficiency programs improvement results.

☒ Stop the increased cost and new regulation to us, the consumer. Delaware met its air quality goals for 2025 in 2017.

☒ Put the money in the state budget, so our elected officials will be able to oversee it.

☒ Send rebates to Delaware electric customers, like they do in other states.

☒ Keep monitoring, and do more analysis. Publicize the analysis, so we know this is the best return on our investment and not your pet projects.

Feeling Unrepresented,
Barbara L. Bullock

No new RIGGI regulations. RIGGI should be canceled as it is, Delaware reached it's 2025 goals by 2017.
Any extra monies should be returned to rate/tax payers.
